

Waveform Generator  
2

Waveform Generator capable of generation of complex waveforms including spiked waveforms. Output is single phase with a frequency range of 5-2,000,000 Hz. Generator may also modify the waveform as necessary, or may provide a time period at zero voltage.

Multiple Output Phase Shifter capable of generating multiple phase outputs varying from 1 phase to 6 phases. The total number of degrees of phase shift between individual outputs is independently variable on each output.

applied 12 phase

Amplifiers  
5

Amplifier increases the voltage level and is adjustable from 0 - 220 volts. Wave shape or phase angle is not affected by the amplification.

Transformers

Transformer increases the output voltage of the amplifier to a maximum voltage of 40,000 volts. This increase is possible with no significant effect on the wave shape or phase angle.
